## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 25-30 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claims 25 and 28 recite a single DAC to implement a discrete digital mode and analog mode. A digital to analog converter (DAC) only converts a digital input signal to an analog output signal but a DAC alone can not implement both digital and analog modes as claimed.

3. The following rejections are made based on the examiner's best interpretation of the claims in light of the 35 USC 112 rejection.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the

Art Unit: 2182

treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or  
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

5. Claims 2-5,7-11,13-17,19-22 and 24-31 are rejected under 35 U.S.C. 102(e) as being anticipated by Sagues et al. (US 2002/0119706 A1).

Sagues discloses a control circuit I/O for configuring an module 66 having a pin (connected to line 94, see Fig 6), at least one port comprises at least an input, output, +/-15, ground, analog, digital etc. (see port connected to 98-112 and par. 44), wherein the port controlling the state of the solid state switch assembly to configure the pin (par. 43).

As for the system with a PLC having a CPU along with the I/O module, please note that the I/O module of Sagues is for use with a PLC (see background) in the same manner as that of applicant.

As best understood of limitation regarding the DAC, please note Sagues discloses a DAC 116 for implementing an analog output from a digital input.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. de Nijs (EP 0639 916A2) discloses configurable I/O utilizing a switch 68.
